

Open a new Illustrator doc and place your template.

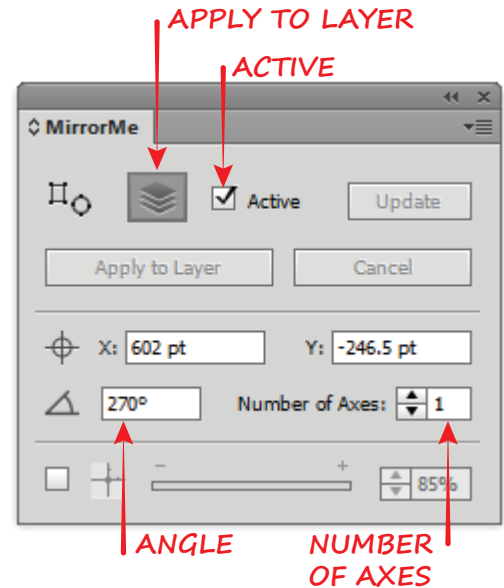

Open the MirrorMe Options box located in the Window drop down and use the following settings:

If you prefer to draw on the right side of your page set the angle to 270

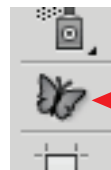

If you prefer to draw on the left side of your page set the angle to 90

Number of Axis – 1

Select Apply to layer and check the active box.

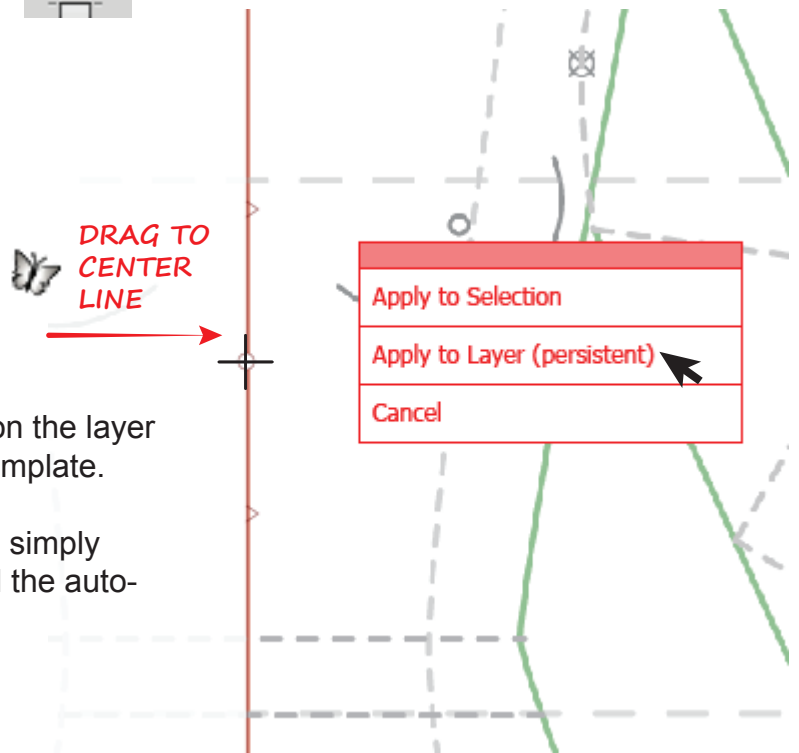

Click on the Butterfly Icon in the tool bar

Release the mouse and drag out the axis until it aligns with the center line of your template and click to set.

A red box will appear
Select **Apply to Layer**
And that's all.

Now you can start drawing and everything on the layer will be reflected across the center of your template.

If you need to draw an asymmetrical object, simply make a new layer and draw it there to avoid the automatic mirror.

When you have completed the flat :

Uncheck the Active box
Select **Object> Unlock All**
to release the reflected sections
Select the entire flat and Group it.

Now you can reflect the flat and draw the back view.
